TECHNICAL SKILLS

Programming Languages :

Python, Java, C, SQL

Web Development : React,

JavaScript, CSS, HTML

Database Managment : SQLite,

MongoDB

Platform & Infrastructure : Linux,

Docker, Kubernetes, Microservices

Architecture, RabbitMQ, FastAPI

AI & LLM Systems : RAG Systems,

LLM Integration, Embedding Models

SOFT SKILLS

Self Discipline

Self learning

Organization Skills

Detail Oriented

Excellent Microsoft Office skills

LANGUAGES

Hebrew ; Native Speaker

English ; Fluent

Arabic ; Good (Reading and Writing)

VOLUNTEERING

Mentoring And Assisting First

Year Computer Science

University Students

Motivated Software Engineer, passionate about designing architectures, debugging code and cross-functional teamwork. Currently seeking a Student Software Engineer role to contribute to projects and continue growing as a developer and team player. Proficient in Python, Java, C and have hands-on experience with distributed systems and AI tools.

EXPERIENCE

Software Engineer Intern — TracePCB | Jul 2026 – Sep 2026

- Automated data integration workflows, synchronizing and enriching thousands of CRM records through API integrations.
- Designed event-driven workflows for data processing, CRM synchronization and automated email sequences.
- Built an automated lead generation workflow that expanded the sales pipeline and contributed to increased sales.

PROJECTS

Cloud-Based Microservices Application with CI/CD Automation

- Designed and developed a distributed **microservices-based REST application** with CRUD operations, inter-service communication, and **MongoDB** persistence.
- Containerized and deployed the system using **Docker**, **Docker Compose**, **NGINX** and **Kubernetes**, implementing load balancing, access control, persistent storage and configuration management.
- Built a **CI/CD pipeline with GitHub Actions**, including automated builds, **pytest** integration testing, and artifact generation.

Escape The Query Room - An Interactive SQL learning game

- Developed a **Full-Stack** gamified SQL learning platform where users solve database challenges across themed escape rooms, built with **ReactJS** frontend and Python **Flask** backend.
- Managed multiple **SQL** databases for user data, progress tracking, and themed challenge content.
- Designed and implemented **RESTful API** architecture for seamless client-server communication.
- Integrated **Google Gemini API** to provide context-aware, AI-generated hints for SQL challenges.
- Watch a demonstration video illustrating project functionality [here](#).

EDUCATION (2022 - TODAY)

B.Sc in Computer Science , Third year | Reichman University

- Relevant Coursework : Introduction To Computer Science, Advanced Programming, Database Management, Operating Systems, Cloud Computing And Software Engineering.
- Completed academic coursework at The Open University of Israel prior to beginning my degree, demonstrating strong independent learning and self discipline.

MILITARY SERVICE (2019 - 2022)

- Served as an Analyst, designing and automating data pipelines to improve performance and reliability across operational systems.
- Developed analytical and SQL-based tools supporting large-scale workflows for senior command staff.
- Collaborated cross-functionally to introduce automation into manual processes.
